Dear recruiters team,

I'm excited to apply for Android Developer position at Google developers team, I'm an experienced Android developer have created a lot of android apps, I love to work with you and help to develop great apps

In last few years I developed a lot of android apps that are pretty and useful with good Architecture and memory usage, for example Asteroid Radar that App to view the asteroids detected by NASA that pass near Earth, and Movie app that show movies,

I worked in multiple teams and created lots of apps and services t

I'm learned more by taking Android Kotlin Developer Nanodegree on Udacity, which taught me, advanced Android development, app architecture, room database, restful APIs, navigation components, testing and more technologies and tools,

Also, I'm fast learner I love to be aware of all new technologies and develop my skills to work with world's change by reading books, in addition to I am with big knowledge with agile methodology and teams' framework, and freelancing.

I hope to be a member of your team and share with you my skills and experience as android apps developer, I am available to meet in person in Giza-Egypt.

Thanks for your consideration

Best Regards

Romani
